

AN URBAN PLANNING PROJECT

City Design

The City design is a series of studies of various cities which I regard as inspirational cities that should be taken as examples to create better urbanist spaces. Such include Helsinki, built in the exact same style as St Petersburg on a rocky peninsula, which due to its small size, straight streets and feeling of cosiness through the urban density is considered attractive and liveable by locals and foreign visitors alike. Others include St Petersburg, Paris, Vienna, Budapest, and various Italian cities, whose architectural richness and urban planning has been a constant fascination for me. Another goal was to study Chinese traditional urbanism, in particular Suzhou, nicknamed "The Venice of the East", a city that has various canals acting as regular streets. The city also features small provincial houses and some of the most famous Chinese gardens renowned worldwide.
